

— AI · DATA · AUTOMATION

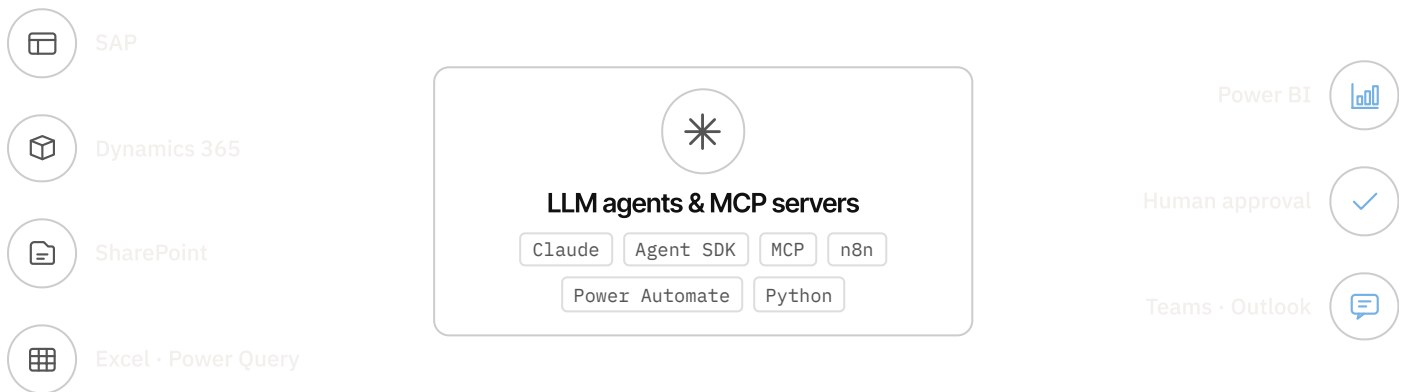

Dixon Choi

Sole technical lead in a two-person procurement PMO at Gategroup, covering seven European countries: spend data, workflow automation, and LLM agents wired into the systems those teams already work in. On the side I run DDX Consulting, where I build automations for other companies and then run them.

📍 London, UK ✉ choimanto62@gmail.com 🔗 LinkedIn 🐙 GitHub

THE STACK I BUILD ON

Scattered source systems on the left, the automation layer I build in the middle, and the place a decision gets made on the right. Nothing reaches the outside world without a person approving it.

TOOLS I WORK IN

— AI & automation

- Claude / Anthropic API
- MCP servers
- Claude Agent SDK
- Gemini
- GenAI solution design
- n8n
- Power Automate
- Intelligent automation
- Prompt engineering

— Procurement & systems

- SAP
- Dynamics 365
- SharePoint
- Power Platform
- Source-to-Pay / P2P
- Spend analytics
- Supplier relationship management
- Budgeting & KPI development
- ERP data consolidation

— Data & BI

- Power BI
- Power Query (M)
- DAX
- SQL
- Python · pandas
- Tableau
- GIS / shapefiles
- Machine-learning forecasting
- Excel data models

— Build

- TypeScript
- Next.js
- React
- Prisma
- Postgres
- React Native · Expo
- Firebase
- Git

EXPERIENCE

Nov 2021 — present

Apr 2025 –
Present

PMO Europe Procurement Analyst

Gategroup, London, UK

- Sole technical lead in a two-person Procurement PMO running the digital transformation across seven European countries. I design, build and deliver the process, data, automation and AI those teams run on.
- Built and deployed in-house LLM agents for the European procurement team: contract review, supplier discovery and negotiation support.
- Built Model Context Protocol (MCP) servers that connect those agents securely to internal spend, contract and supplier systems, so the workflows run against live data.
- Automated core procurement workflows with Power Automate: supplier communications, invoice and rebate collection, and budget submission.
- Built the Power BI reporting suite from scratch: direct and indirect spend, inflation, impact and budgeting. It consolidates several ERP systems through Power Query (M), DAX and SQL.
- Built the global Supplier Relationship Management (SRM) programme from scratch. I defined the process and built the system behind it in Power Automate, SharePoint and Power BI, including the supplier scorecards and performance reporting the European teams use.
- Developed KPI frameworks that measure procurement impact and cost avoidance beyond headline savings, and feed category and sourcing decisions.

May 2025 –
Present

Founder

DDX Consulting · ddx-consulting.com

Custom ERP and process design, systems integration and automation for procurement, supply chain, sales and marketing teams. DDX builds them, then runs them. Clients watch every run and sign off anything that reaches the outside world, from Tally, the workspace I built for exactly that.

Sep 2024 –
Dec 2024

Graduate Data Analyst

Useful Projects, London, UK

- Owned the full data lifecycle for carbon analysis: finding the carbon hotspots, forecasting decarbonisation roadmaps, and visualising both in Power BI and GIS.
- Produced carbon footprint reporting to RICS and GHG standards, and advised clients on decarbonisation strategy across energy, material and operational areas.
- Worked with engineering, energy and leadership stakeholders to define the metrics and shape the analysis roadmap.

Dec 2023 –
Jan 2024

Data Analyst

Southeast London Community Energy, London, UK

- Advised the energy-poverty team on service delivery, analysing open data with Python and Excel. That work helped lift the service's utilisation rate by 10%.
- Sourced and validated open data with Python and Tableau, then mapped poverty and poor energy performance hotspots onto government GIS shapefiles.
- Wrote up the findings and a revised priority strategy, and presented both to senior management.

Feb 2023 –
May 2023

Data Analyst Trainee

Generation, London, UK

- Built pipelines for large, multi-source datasets: Python for the web scraping, SQL and Excel for storage and cleaning, Power BI for visualisation.
- Mentored teammates and wrote training materials that broke the harder concepts down, and often took the solutions further than the course framework required.

Nov 2021 –
Aug 2022

Business Analyst (Placement)

Skywise Engineering, Hong Kong

- Led the move from paper record-keeping to an engineering project-management system, and owned the full lifecycle: requirements, impact assessment, prototyping, development, UAT and integration.
 - Built a Jira dashboard for agile project tracking: KPIs, deadlines and milestones. It helped cut project timelines by 5%.
 - Ran requirement-gathering with staff and clients through surveys and interviews, and handled the change management: communication, training and feedback. Client satisfaction went up 10%.
-

EDUCATION

Oct 2019 –
Jun 2023

BSc Computer Science with Artificial Intelligence

University of Leeds, UK

Sep 2018 –
Jun 2019

Foundation Degree in Science

Chase Grammar School, UK

Sep 2016 –
Jun 2018

GCSE

Chase Grammar School, UK

Got a process worth automating?

Procurement, supply chain, or anything where the data is scattered and the workflow is still manual. Email is the fastest way to reach me.
