

— PROCUREMENT TRANSFORMATION · AI & AUTOMATION

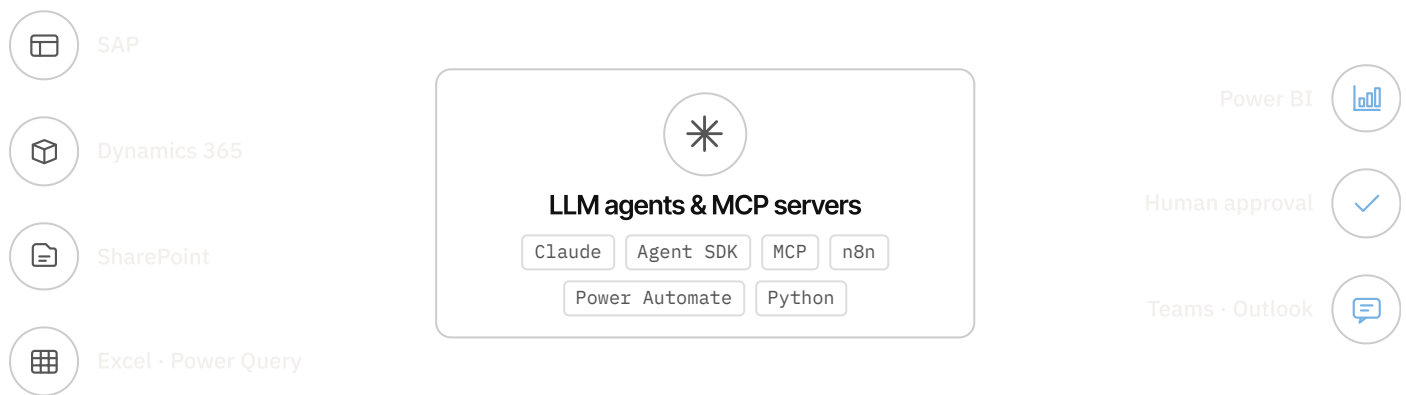

Dixon Choi

I lead the digital transformation of European procurement at Gategroup: seven countries, around 80 users, delivered out of a two-person PMO. I set the roadmap, design the process and system changes, build them, and run the rollout into each country. The work is spend data, workflow automation, and LLM agents on MCP servers wired into the systems those teams already use. Alongside the day job I run DDX Consulting, where I design the automations and then operate them.

📍 London, UK ✉ choimanto62@gmail.com 🔗 LinkedIn 🐙 GitHub

THE ARCHITECTURE I RUN

Source systems on the left, the automation layer in the middle, the decision on the right. I set what connects to what, and nothing reaches the outside world without a person approving it.

TOOLS I SHIP WITH

— AI & automation

Claude / Anthropic API MCP servers Claude Agent SDK
n8n Power Automate

— Procurement & systems

SAP Dynamics 365 SharePoint Power Platform
Source-to-Pay / P2P Spend analytics
Supplier relationship management KPI frameworks

— Build

TypeScript Next.js React Postgres
React Native · Expo Git

— Data & BI

Power BI Power Query (M) DAX SQL
Python · pandas GIS / shapefiles

— Delivery

Requirements gathering Process design UAT
Rollout & training Change management
Stakeholder engagement Agile · Jira

EXPERIENCE

Apr 2025 –
Present

PMO Europe Procurement Analyst

Gategroup, London, UK · digital transformation lead

- Lead the digital transformation of European procurement across seven countries and around 80 users, from a two-person PMO. I decide what gets built, in what order, and how it lands with the country teams.
- Run each rollout myself, with no vendor and no internal dev team in between: requirements and process design with the country teams, build, UAT, then training and adoption in each market.
- Stood up in-house LLM agents for contract review, supplier discovery and negotiation support, on MCP servers I built against live spend, contract and supplier systems.
- Set the governance around that AI work: what the agents can reach, what they cannot, and a human sign-off before anything leaves the business.
- Moved supplier communications, invoice and rebate collection and budget submission out of email and spreadsheets into Power Automate, so the monthly cycle runs as one process instead of a workbook per country.
- Built the region's Power BI reporting over several ERPs in Power Query, DAX and SQL, then designed the SRM programme and delivered it in Power Automate, SharePoint and Power BI. Supplier scorecards now used by 60+ stakeholders, against a KPI framework I set that counts cost-avoidance as well as headline savings.

Founder

DDX Consulting · ddx-consulting.com · alongside Gategroup

Custom ERP and process design, systems integration and automation for procurement, supply chain, sales and marketing. I design the automations, then operate them. Clients watch every run from Tally, the workspace I built for that, and sign off anything that reaches the outside world.

Founder

Chumi · chumi.pet · alongside Gategroup

Sep 2024 –
Dec 2024

Graduate Data Analyst

Useful Projects, London, UK

- Owned the carbon-analysis lifecycle: hotspotting, decarbonisation forecasts, and the Power BI and GIS the client used to act on both. Reporting to RICS and GHG standards.
- Set the metrics with engineering, energy and leadership, and shaped the analysis roadmap they signed off.

Dec 2023 –
Jan 2024

Data Analyst

Southeast London Community Energy, London, UK

- Advised the energy-poverty team on where to put the service. Open data in Python and Excel; utilisation up 10%.
- Mapped poverty and poor energy-performance hotspots onto government GIS shapefiles (Python, Tableau), then presented a revised priority strategy to senior management.

Feb 2023 –
May 2023

Data Analyst Trainee

Generation, London, UK

- Built multi-source pipelines in Python (web scraping), SQL and Excel with Power BI on top, and wrote the training material the rest of the cohort used.

Nov 2021 –
Aug 2022

Business Analyst (Placement)

Skywise Engineering, Hong Kong

- Led the move from paper to an engineering project-management system: requirements, impact, prototype, build, UAT and integration.
- Ran the Jira tracking the team used for KPIs, deadlines and milestones (timelines down 5%), and the change management around it: surveys, training, feedback. Client satisfaction up 10%.

EDUCATION

Oct 2019 –
Jun 2023

BSc Computer Science with Artificial Intelligence
University of Leeds, UK

Need someone to own the process, not hand you a dashboard?

Procurement, supply chain, or anything where the data is scattered and the workflow is still manual. I do the design and the build, not one or the other. Email is the fastest way to reach me.
